1 Introduction

1.1 Revision History

1.2 Purpose and Scope

The purpose of this document is to provide a complete description of the integration testing plans for PowerEnjoy. It will focus on testing the proper behavior of the software by checking the interoperability between its components. It is intended for developers and for any team member involved in the testing process.

The aim of this project is to specify in detail a new digital management software for PowerEnJoy, a car-sharing service that employs electric cars only.

PowerEnjoy will offer a very valuable service to its users, letting them borrow cars to drive around the city freely, as an alternative to their own vehicles and public transport. Among the advantages of using PowerEnJoy we can note being able to find available cars in any place that is served by our system and having dedicated spots to park in (namely, PowerEnJoy's power grid stations). Furthermore, thanks to the fact that all the cars that we provide are electrically powered, PowerEnJoy is also very environmentally friendly.

1.3 List of Definitions and Abbreviations

1.3.1 Definitions

- Guest: a person that is not registered to the system.
- *User*: a person that is registered to the system. Users can log in to the system with their email or username and their password. Their first name, last name, date of birth, driving license ID are stored in the database.
- Safe area: a location where the user can park and leave the car. Users can end their ride and park temporarily only in these locations. The set of safe areas is predefined by the system.
- Power grid station: a place where cars can be parked and plugged in. While a car is plugged in a power grid station its battery will be recharged. Power grid stations are by definition safe areas.
- Available car: a car that is currently not being used by any user, and has not been reserved either. Available cars are in good conditions (not dirty nor damaged) and don't have dead batteries.
- Reservation:

- the operation of making a car reserved for a user, i.e. giving permission to unlock and use the car only for that user, forbidding reservations by other users.
- the time period between the moment a reservation is requested and the moment the user unlocks the car, or the reservation is canceled.
- *Ride*: the time period from the moment a reserved car is unlocked to the moment the user notifies that he wants to stop using the car and closes all the doors. A ride doesn't stop when a car is temporarily parked, but continues until the user chooses to leave the car definitely.
- Temporary parking: the act of parking a car in a safe area and, after notifying the system, locking it and leaving it for a finite amount of time. The user that does this retains the right to use the car and can unlock it later to use it again.
- Bill: a record of the money owed by the user at the end of a ride.
- Outstanding bill: a bill that hasn't been paid yet.
- Suspended user: a user that cannot reserve or use cars. Usually users are suspended because they have outstanding bills.
- Payment method: a way to transfer money from the user to the system. Our system will only accept credit cards and online accounts like Paypal.
- Payment API: an interface to carry out money transactions, offered by the external provider associated to the payment method used (e.g. a bank).

1.3.2 Acronyms

• **DD**: Design Document

• RASD: Requirements Analysis and Specification Document

• **DB**: Database

• DOB: Date of birth

• PGS: Power Grid Station

• GPS: Global Positioning System

1.3.3 Abbreviations

• [Gx]: Goal

• [RE.x]: Functional Requirement

• [UC.x]: Use Case

1.4 List of Reference Documents

- Requirements analysis and specification document: "RASD.pdf"
- Design document: "DD.pdf"
- Project description document: "Assignments AA 2016-2017.pdf"

2 Integration Strategy

- 2.1 Entry Criteria
- 2.2 Elements to be Integrated
- 2.3 Integration Testing Strategy
- 2.4 Sequence of Component / Function Integration
- 3 Individual Steps and Test Description
- 4 Tools and Test Equipment Required
- 5 Program Stubs and Test Data Required
- 6 Effort Spent
 - Pietro Ferretti: hours of work
 - Nicole Gervasoni: hours of work
 - Danilo Labanca: hours of work
